

CAM+ • MEDICAL MONITORING

Nothing in your fridges, freezers or labs goes unwatched. Ever.

Continuous monitoring for hospital laboratories, blood banks and pharmacies — so the people responsible for temperature-critical stock can stop worrying.

WHAT YOU NEED • WHAT CHECKIT GIVES YOU

A freezer fails at 2am on a bank holiday.

Someone gets a phone call. Alarms escalate by call, SMS and email until a named person accepts — long before the stock is lost.

Skilled staff are doing clipboard checks.

Manual checks go to zero. No twice-daily rounds, no transcription, no chasing missing logs. Time goes back to patients and science.

An inspector asks for six months of records.

They're already there. Every reading, alarm and action is logged automatically and tamper-proof. One click to a report, signed off.

Every site does it differently.

One system, every site. The same sensors, screens and records across a whole network — with live visibility for the people accountable for it.

COVERS EVERYTHING THAT HAS A SAFE RANGE

Fridges & freezers

ULT & LN₂ cryogenic

Blood bank

Incubators

Room temperature & humidity

Door contacts

O₂ • CO₂ • pressure

Power & equipment faults

What it's worth, every year

Across Checkit's NHS customer base. 60+ trusts, 300+ sites.

£2.6m

less stock lost to excursions

£3.7m

of staff time back on the ward and bench

£840k

saved in audit preparation

“

Checkit replaced a very painful and highly inefficient process and helped bring us into the digital era. They've saved us countless hours, and it's far more accurate.

Joseph Ranne, Project Manager — Octapharma

Come and talk to us at MSC Expo 2026

Tell us how many fridges and freezers you have. We'll tell you what monitoring them properly looks like, what it costs, and how fast it goes in. **Proud sponsor of the MSC 2026 Laboratory Cup.**
